

## **Real Time Spot Rate and Forward Rate Projection Services**

### **Business Requirements**

A leading Financial Solution provider in real estate investment industry needs a real-time pricing curve to enhance their pricing system. The client currently lacks of real-time interest rates data feed including treasury rates, swap rates, and various index rates. They also require a real-time projection forward curve added to its system in order to produce prices.

### **Beyondbond Solution**

With Beyondbond's cutting edge technology, the client was provided a flexible and efficient solution to access real-time interest rates and forward curve projection. Beyondbond delivered the rates in a simple, secure web services API. The solution was provided in an ASP format to reduce development maintenance cost. By simply signing on to Beyondbond's web server the client was able to get real-time data feed and projections 24 hours a day, 7 days a week.

### **Success Factor**

The ability to incorporate current technology and deliver the information was the niche. The client was able to access the real-time data and forward curve projections anywhere, anytime. In using Beyondbond's ASP model, it was an ideal and cost effective solution for the client to quickly integrate those elements to its pricing system.

### **Business Value**

The client is able to improve its pricing system with simple integration that is low cost and low maintenance. By using Beyondbond's real-time spot rate and forward rate projection services, the client creates more opportunities to market their product.
